Guide visitors. Turn interest into action.

Your Result: Personalized Recommendation Tool

A Personalized Recommendation Tool helps visitors receive a tailored next step based on their goals, challenges, preferences, and available options.

1

Best for businesses that...

- Recommend different next steps for different people
- Have several resources, offers, services, or support paths
- Want to guide visitors without overwhelming them
- Help clients decide what to focus on first
- Need more flexibility than a simple service match or readiness score

2

This tool helps visitors...

- Understand what to prioritize next
- Receive a more tailored starting point
- Choose between resources, services, or actions
- Feel guided instead of overwhelmed
- See how different pieces of support could fit together

3

Possible questions your tool could ask

- What is your main goal right now?
- What feels most urgent?
- What have you already tried?
- What kind of support feels most useful?
- Which next step would feel realistic for you?

4

Possible result structure

Example results could include:

- Start With Strategy
- Focus on Visibility
- Build the Foundation
- Choose Guided Support
- Follow a Custom Resource Path

The strongest recommendation tools are based on a clear set of options, not endless possibilities.

5

How this connects to your lead path

After someone receives a recommendation, they can be guided toward a specific resource, service page, inquiry form, booking link, or result-based email sequence. This makes your website feel more helpful and less like a list of disconnected options.

Want help turning your recommendations into a tool?

A Tool Fit Session can help map your options, recommendation logic, questions, result pages, and follow-up path.
